

Appl. No. 10/725,526

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (original): A distributed power supply arrangement comprising a plurality of power sources for supplying power to a plurality of loads via a power distribution network, the power sources and the loads being connected to the power distribution network whereby the power sources are coupled to the loads via respective resistances of the power distribution network, the arrangement further comprising at least one voltage sensor for sensing voltage at at least one point in the power distribution network, wherin each of the power sources is responsive to the sensed voltage for supplying a regulated current or a regulated power to the power distribution network.

Claim 2 (original): An arrangement as claimed in claim 1 and comprising a plurality of said voltage sensors for sensing voltages at a plurality of points in the power distribution network.

Claim 3 (original): An arrangement as claimed in claim 2 wherin each of the power sources is responsive to an average of the sensed voltages for supplying said regulated current or regulated power to the power distribution network.

Claim 4 (original): An arrangement as claimed in claim 1 wherein the power sources comprise regulated current sources.

Claim 5 (currently amended): An arrangement as claimed in claim 4 wherein the power sources are arranged for supplying regulated currents with different relative weights to the power distribution network with different relative weights.

Claim 6 (original): An arrangement as claimed in claim 1 wherein the power distribution network comprises power and ground planes of a circuit card on which the loads are provided.

Claim 7 (original): An arrangement as claimed in claim 6 wherein the plurality of power sources are arranged on the circuit card.

Appl. No. 10/725,526

**Claim 8 (cancelled)**

**Claim 9 (original):** A method of regulating voltage in a power distribution network including a plurality of power sources for supplying power to a plurality of loads, comprising the steps of:  
sensing voltage at at least one point in the power distribution network; and  
regulating currents supplied by the plurality of power sources to the power distribution network in dependence upon the sensed voltage.

**Claim 10 (original):** A method as claimed in claim 9 wherein the voltage is sensed at a plurality of points in the power distribution network, and the currents supplied by the plurality of power sources are regulated in dependence upon an average of the sensed voltages.

**Claim 11 (original):** A method as claimed in claim 10 wherein the currents supplied by the plurality of power sources are regulated to have different relative weights.

**Claim 12 (cancelled)**

**Claim 13 (Original):** A method as claimed in claim 9 applied to a circuit card, wherein the loads comprise integrated circuits on the circuit card and the plurality of power sources comprise switch mode power converters on the circuit card.

**Claim 14 (original):** A method as claimed in claim 13 wherein the power distribution network comprises power and ground planes of the circuit card.

**Claim 15 (original):** A power supply arrangement comprising a plurality of power sources each arranged for supplying power via a power distribution network to each of a plurality of loads, and at least one sensor for sensing a parameter of the arrangement for regulating the power supplied to the power distribution network from the plurality of power sources.

**Claim 16 (original):** A power supply arrangement as claimed in claim 15 wherein the power sources comprise regulated current sources.

Appl. No. 10/725,526

Claim 17 (original): A power supply arrangement as claimed in claim 15 wherein each sensor comprises a voltage sensor for sensing voltage at a respective point in the power distribution network.

Claim 18 (cancelled)

Claim 19 (original): A power supply arrangement as claimed in claim 15 and comprising a plurality of said sensors each for sensing said parameter at a respective one of a plurality of points in the power distribution network.

Claim 20 (cancelled)
